

# WHAT OUR CUSTOMERS SAY!

**James Brabyn** “Jesse, Brad and Mitch I am emailing you to thank you for installing my Solar Panels on my house in Stanford-le-Hope. Have just received my MCS certification and as you know the system is active so I can monitor how much money I am saving from my computer. Really impressed with the monitoring software and the complete service that you have given me. The solar panels are on two sides of the house and look great (just went up the scaffolding to have a closer look). If you want to use my installation as an example to others feel free to refer them to me and I will be happy to show them the system and the environmental benefits they can achieve by reducing their electricity demand as they are actually producing it locally. The system is already clocking up savings in showing energy generated and savings made on my PC and the sun hasn't even made an appearance yet!”

**Paul Harris** “I found Newhaven solar to be very professional. Their engineers were very knowledgeable and it certainly put my mind at ease knowing that a qualified roofer was taking care of the new slate roof and a qualified electrician was getting to grips with the inside of my house with little disruption, I would recommend this company to anyone looking to go green.”

**Mike Wilson** “The whole solar experience from sales to completion was far easier than expected, Newhaven solar were true to their word from day one. The installation went very smoothly and Jesse and Brad were a pleasure to deal with. I'm now the proud owner of a 3.6kw system that is making me money as I write this, the monitoring system is fantastic and allows me to actually see what I invested in.”

**Richard Whitehead** “I only had one quotation for my solar installation, having Newhaven solar survey my property and witness the professionalism and knowledge of the owners Jesse and Brad it was clear I would be in safe hands. The fact that having a well experienced roofer do his bit on the roof and an experienced and fully qualified part P electrician taking care of the electrics really gave me the confidence to look no further. The monitoring system is great, not only does it tell me how much money I've made, it even tells me how many kettles I could have boiled with the electricity I have generated.”
